	Effective Date	2013-04-15	Revision#	6	

## 2.0 Equipment description

The equipment described by this URS is a "BUFFER PREPARATION TANK" with a Gross volume of 40L. This equipment will be used to prepare **Buffer solution as well as Stabilizer solution** for the process.

The Tank shall be suitable to take water for injection (WFI) of 85°C for WIP and pre-weighed materials. The Buffer preparation tank will be installed in a clean room of Class "C" and therefore have to meet all relevant requirements of clean room.

Design, function and control of the unit have to be GMP compliant.

The equipment should consist of following parts in order to run operation smoothly.

S. No.	Description	Purpose
1.	Shell	To prepare and hold the Buffer Solutions
2.	Top closure	Torispherical lid
3.	Bottom closure	Torispherical
4.	Insulation	To avoid heat loss
5.	Cladding	Required to cover insulation
6.	Agitation	Bottom magnetic mixer arrangement with variable speed
7.	Provisions for different nozzle connections	To be used for WIP/Product/RM transfer

## 2.1 General Requirements

The general design must be hygienic, with no dead legs and no air pockets. The buffer preparation system must be fully drainable.

This Tank must be a floor-standing type with mounting legs on castor wheels.

**a. Dosing unit:** ALL powder raw materials are added into the vessel through the hand hole and WFI shall be added through the Spray ball

**b. Spray ball:** The port with Spray ball covering the entire area with 360° shall be provided on the top dish for the addition of WFI and other process media.

**c. Vent Filter assembly:** The vessel shall be provided with the vent filter assembly comprising of hydrophobic type vent filter with SS housing. The housing shall be provided with the Staubli connectors for on line filter integrity testing of the filters. The same filter shall be used as a pre-filter for Compressed air. The pressure inside the vessel shall be monitored by a Pressure gauge on the top dish.

**d. Sampling Valve:** It is also Zero Dead Leg type valve directly welded to vessel bottom centrally, having a PTFE diaphragm. It shall be provided with a separate line for pure steam sterilization

**e. Flush Bottom Valve:** It is also Zero Dead Leg type valve directly welded to vessel bottom centrally, having a PTFE diaphragm. It shall be provided with a separate line for pure steam sterilization

## 2.2 Purpose of use

Stainless steel tanks used to prepare aqueous buffer solutions. It should also be possible to fill ready-made buffer salts into the buffer preparation tank and mix it with WFI.

The tanks have to be designed, constructed, built, installed and commissioned to prepare and store

	Identification #	BF-BPT 01	Document#	URS/BF-BPT 01	
	Effective Date	2013-04-15	Revision#	6	

buffer solution in sufficient quantity.

Ingredients for buffer preparation are manually weighed and transferred into the buffer preparation tank. WFI will be added in the tank.

### General vessel specifications are as under:

Geometric volume	40 L
Working volume	20L
Material of Construction	SS316L
Dead volume	Vendor to specify
Max mixing volume	25 L
Min mixing volume	5 L
Media working temperature range	25°C – 85°C
Design temperature	150°C
Surface Finish	Internally Electro polished up to <0.4 Ra
	Externally Mechanically polished up to <1.2 Ra, matt finish

### Nozzle schedule mentioned in sec 6.7

#### Note:

I.	This Technical Specification is the basis for an inquiry to a vendor and therefore the basis for the vendor's proposal.
II.	The vendor is asked to state in "REMARKS" column with "yes" if the described requirement will be completely fulfilled and with "no" in case the requirement will not or cannot be fulfilled with the proposed equipment. In case of an deviation a comment must be inserted or enclosed as a separate annexure by referring to the respective URS specification number.
III.	The vendor must clearly comment each item of the Technical Specification. The comments must be in English language. If extra cost for necessary options become necessary the item must be clearly stated.
IV.	In case that the requirement includes a question or request or an information from the vendor, the answer / information should be stated in the "REMARKS" column.
V.	The final version of this document including the vendor's comments will become basis of a potential purchase order or contract.
VI.	The Technical Specification serves to define a summary of all vendor's requirements concerning scope of delivery and services.
VII.	The vendor is responsible for technically unobjectionable function of the equipment. This TS is not intended to dictate a technical design to the vendor. If agreed upon with the vendor, the vendor can apply his practically proven design.

VIII.	Special Instruction a. If no comments against any specification shall be considered as "NO" and b. If there is no reply / comments against the complete URS by the vendor then it shall be treated as unresponsive / technically non compliant and rejected.			
IX.	All the instruments and controls mentioned in the URS(s) are expected to be standard supply and part of your standard equipment model. In case of any deviation or redundancy or additional scope of supply is noticed, vendor is required to obtain clarification from HLL before submitting the quotes.			
X.	The makes requested are standard international makes. In case of any deviation, vendor to seek clarification from HLL before submitting the offers.			
XI.	Refer document Installation Requirement Specification and Specific Instructions with URS; NPI_110729_IRS_BCG_01			
XII.	Refer Tender document with URS; NPI/110729/EQP/TD/07			
Specifications				Remarks
<b>3.0 Process Description</b>				
<b>3.1 Input &amp; Charging method</b> <i>Note: This section also includes the charging method of process buffer along with charging method for material input.</i>				
3.1.1 WFI (80% of the working volume) shall be added into the vessel. 3.1.2 The powder materials for the buffer preparation shall be charged in to the vessel through the hand hole (powder addition port) in the vessel. 3.1.3 After mixing, WFI is added to make up the working volume.				
<b>3.2 Brief Process Steps</b>				
<b>A) The tanks have to be designed to prepare and store buffer solution respectively in sufficient quantity and quality.</b> a) After adding required amount of WFI, agitator shall start manually. b) The preparation tanks and transfer pipes will be washed & rinsed with hot WFI (85°C) or cleaned by CIP solution.				
<b>3.3 Output &amp; Discharging method</b>				
a) The buffer will be transferred to the flasks manually and autoclaved				
<b>4.0 Productivity Requirement</b>				
<b>4.1 Desired/ suggested capacity</b>				
Atleast 20 L working volume for Buffer Preparation Tank

Specifications				Remarks
6.6.4 All valves should be of sanitary manual Diaphragm valves				
<b>6.7 Specific requirements</b>				
6.7.1 In general the equipment has to be designed in a way to get easy and quick access to all necessary maintenance points.				
6.7.2 The vessel shall be provided with the following on the <b>Top dish</b> :				
• Vessel top to be Torispherically with nozzles				
• Light port (preferably metal fused type)-1 no				
• Hand hole /sight glass - 1 no				
• Port for pressure gauge-1 no				
• Spray ball port - 1 no				
• Spare port -2 no.				
• Exhaust port with sterile vent air filter-1 no Code 7 sterile hydrophobic vent filter and cartridge 0.22/ 0.2 µm hydrophobic of suitable size in SS316L construction.				
6.7.3 <b>On the lower wall side:</b>				
• Sampling port shall be provided at the level of 8L (W.V) – 1 no. (side wall)				
6.7.4 The vessel shall be provided with the following on the <b>Bottom dish</b> :				
• Vessel bottom to be Torispherically dished with a transfer line				
• Port with fixed type of Magnetic GMP mixer-1 no				
• Flush bottom valve -1 no (with separate steam line for steam sterilization)				
6.7.5 Design Parameters:				
• Shell working Pressure- Full vacuum to 2.0 bar (g)				
• Shell working Temperature- 25-134°C				
• Shell design Pressure- full vacuum to 4 bar (g)				
• Shell design Temperature- 150 °C				
6.7.6 The equipment shall be easily accessible for cleaning the non-product contact part at maintenance side of the equipment.				
6.7.7 The CIP process shall be used for cleaning with mobile CIP trolley.				
6.7.8 Vessel shall be on 3 legs MOC: SS 304 with double-roll lockable caster wheels for easy transportation.				
6.7.9 Vendor shall provide flexible hoses to connect from vessel to floor drain.
